PROFESSIONAL SUMMARY:

I am a GIS and Geomatics Engineer with a Master's degree in Geomatics from Lund University, Sweden, specializing in geographic information systems, cartography, spatial data management, and marine geospatial applications.

My professional experience combines GIS engineering, map production, hydrographic data processing, and geospatial analysis across public and private sectors.

I have worked with geographic databases, digital mapping, hydrographic survey data, bathymetry, marine cartography, and spatial information solutions.

My goal is to transform complex geospatial data into accurate, reliable, and meaningful information that supports decision-making.

EDUCATION

Master's Degree in Geomatics

Lund University, Sweden.

Bachelor's Degree in Physical Geography Science

University of Rwanda

PROFESSIONAL EXPERIENCE

February 2025 – Present

Ocean Infinity AB /Sweden Office

Ocean Infinity is a global marine robotics and ocean technology company that specialises in collecting, processing, and analysing data from the world's oceans.

Post : Hydrographic Data Processor

Responsibilities :

- Independently process hydrographic survey data from acquisition to final deliverables while supporting project preparation in collaboration with Senior Data Processors.

- Ensure all deliverables meet project specifications and quality standards, continuously reviewing processing routines to improve efficiency and data quality.
- Communicate effectively with senior staff and project management, provide guidance to other Data Processors on workflows and procedures, and maintain accurate processing logs and documentation.
- Contribute to project reporting and internal software or equipment development, and assist in managing workflow deviations in coordination with senior staff.

March 2021 – February 2025 :

Swedish Maritime Administration (Sjöfartsverket)

The Swedish Maritime Administration is a government agency in Sweden responsible for ensuring that shipping and maritime traffic can operate safely, efficiently, and sustainably.

Bathymetry & Data Source Department.

Post : Map Engineer

Responsibilities :

- Participate in defining technical requirements for new hydrographic survey areas, handle and approve offshore survey measurement data and documentation.
- Maintain and update depth databases for nautical charting from internal and external clients, by performing quality control and cleaning of survey data.
- Assess and validate sounding and frame data. Conduct wreck checks and assess deviations in nautical charts, produce and deliver hydrographic and cartographic products by supporting map production for navigation and maritime safety.

April 2017 – Oktober 2017

Älvstranden Utveckling AB, Göteborg

Älvstranden Utveckling AB is a municipal (government-owned) real estate and urban development company based in Gothenburg, Sweden.

Post : GIS ingenier

Responsibilities:

- Conducted land surveys and supported detailed planning processes, produced thematic maps based on architectural drawings, performed cartographic design and spatial analysis, and calculated BTA (gross floor area) while assessing new building rights.

January 2012 – June 2013

Rwanda Mines, Petroleum and Gas Board

The Rwanda Mines, Petroleum and Gas Board (often called RMB) is a government agency of Rwanda responsible for managing and regulating the country's natural resources related to: Minerals (mining) Petroleum (oil), Natural gas.

Post : Mining License Registration Officer

Responsibilities:

- I worked for Rwanda Mining Petroleum Gas Board together with PGW, a Canadian consultancy company in geology and geophysics; we performed airborne magnetic and radiometric coverage survey . I was the focal point person to follow the tender.
- Registered and managed mining permits and licenses, reviewed compliance with mining programs in accordance with standard procedures, maintain and update permit databases, and report permit status to the management board.

January 2009 – December 2011

Post : GIS Specialist

Responsibilities:

- Survey mineral occurrences, contribute to geological and geophysical databases, updated and create geological maps at a 1:50,000 scale, and collaborate with geologists on geochemical and geological mapping.

TECHNICAL SKILLS

Offshore Survey & Hydrographic Software and Hydrographic Post-Processing Tools.

GIS Software: .Arc GIS , QGIS ,CAD

Data processing software : EIVA NaviEdit / NaviModel, Teledyne CARIS,QPS Qimera, Sonardyne Janus, Applanix POSPac

Microsoft office.

LANGUAGES:

I am proficient in both spoken and written **English, Swedish, and French.**
